

# How to drench a sheep or goat

## DRENCHING

Administering a drug in liquid form orally to an animal. It is the recommended way to deworm a sheep or goat.

- 1) Use drench gun or oral dosing syringe with long metal nozzle.
- 2) Make sure nozzle is smooth and appropriate size for animal.
- 3) Pressure check and calibrate drench gun (syringe) before use.
- 4) Weigh animals to make sure weight estimations are accurate and proper dose will be given.
- 5) Properly restrain animal.
- 6) Hold chin at as natural an angle as possible
- 7) Gently place the nozzle into the corner of the mouth (between incisors and molars) to deliver drench over back of tongue.
- 8) Squeeze gently.
- 9) Watch that animal swallows drug.
